

APP Disruptive Technology Presentation  
Ben Buckingham – VP Strategy & Operations

?Wf49kj

# Introduction to distributed ledger

1. Public versus private Distributed Ledgers
2. For purpose Distributed Ledgers
3. Distributed Ledger Technology versus DLT Applications

Distributed Ledger Technology is currently being trialed by 40+ banks globally

# Distributed ledger has uses across financial services

## Retail payments

### Use cases:

- Parallel currency systems (using traditional & crypto currencies)
- Remittances

## Wholesale payments

### Use cases:

- Correspondent banking networks
- Cross-border FX

## Capital Markets

### Use cases:

- Securities settlement
- Asset documentation

## Transaction banking

### Use cases:

- Supply chain and receivables
- Commodities trade finance
- Regulatory compliance

identitii's focus

identitii is helping to solve the lack of information exchanged by ageing legacy payment & bank systems

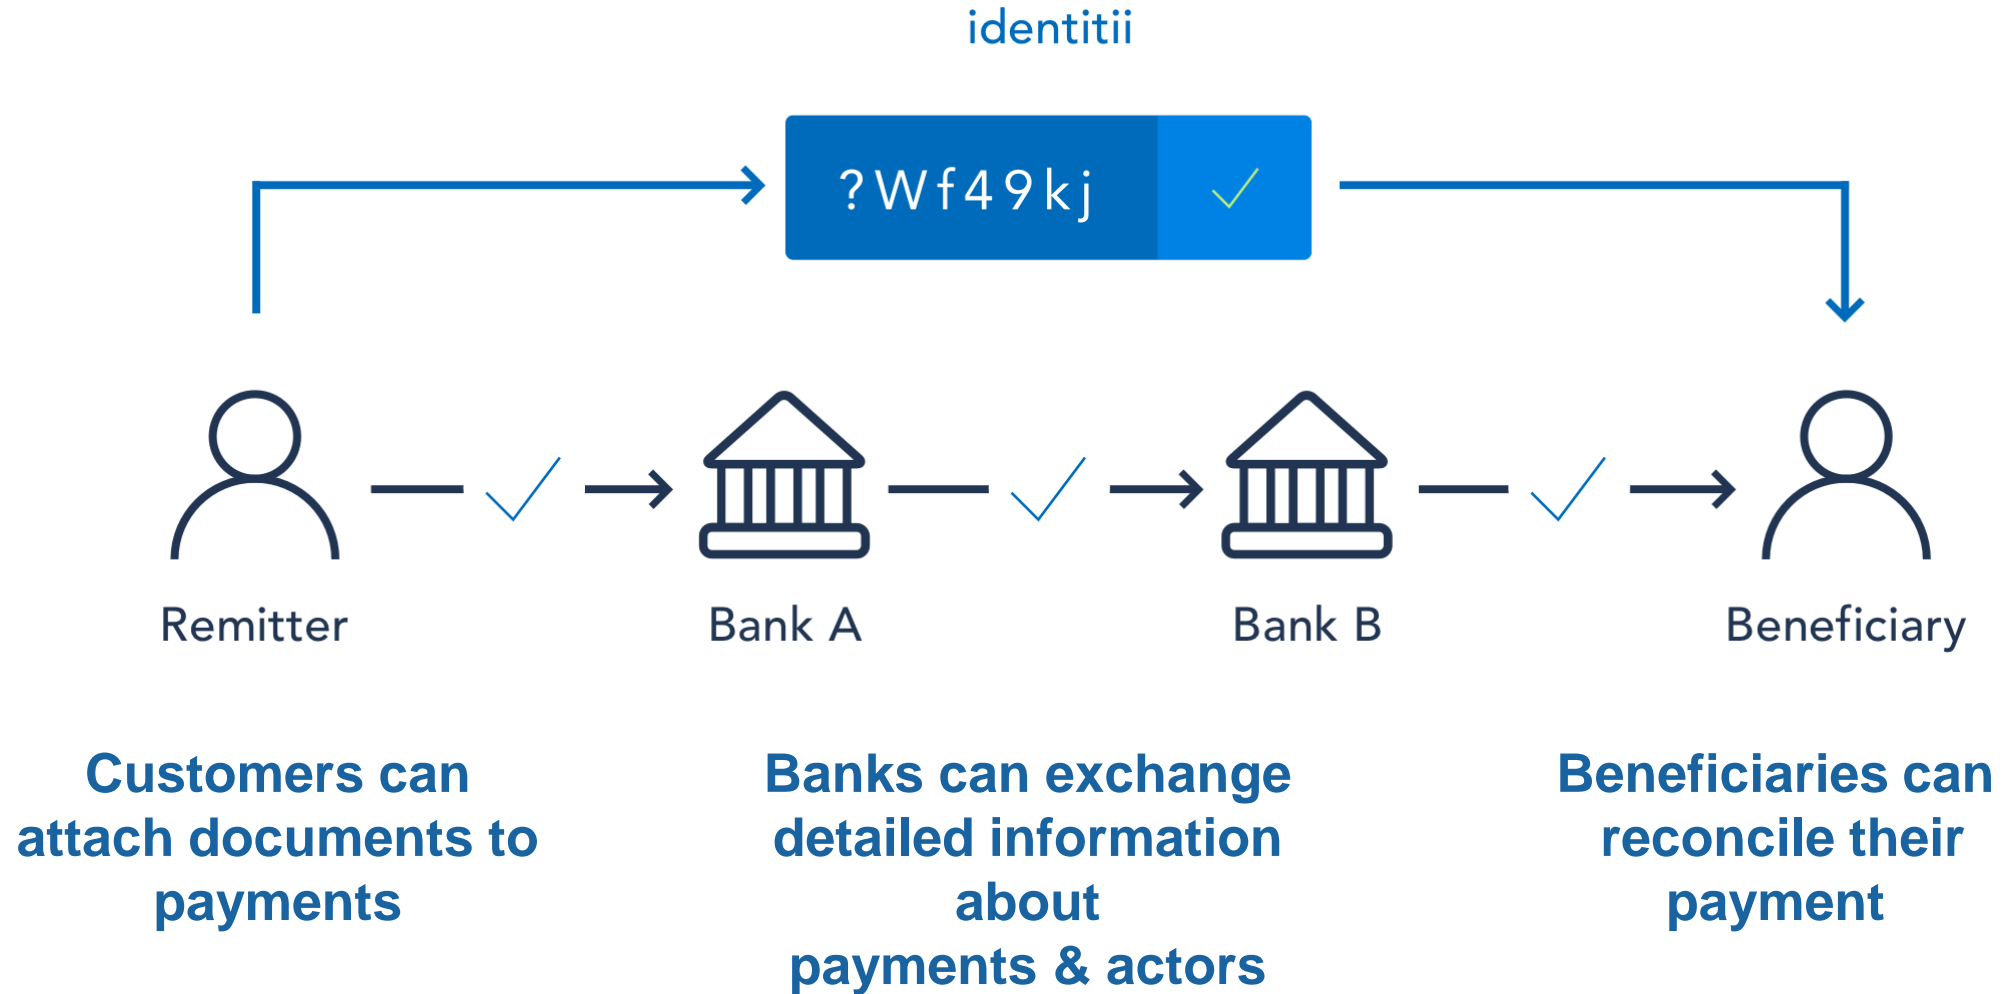

**Banks  
capture limited  
information**

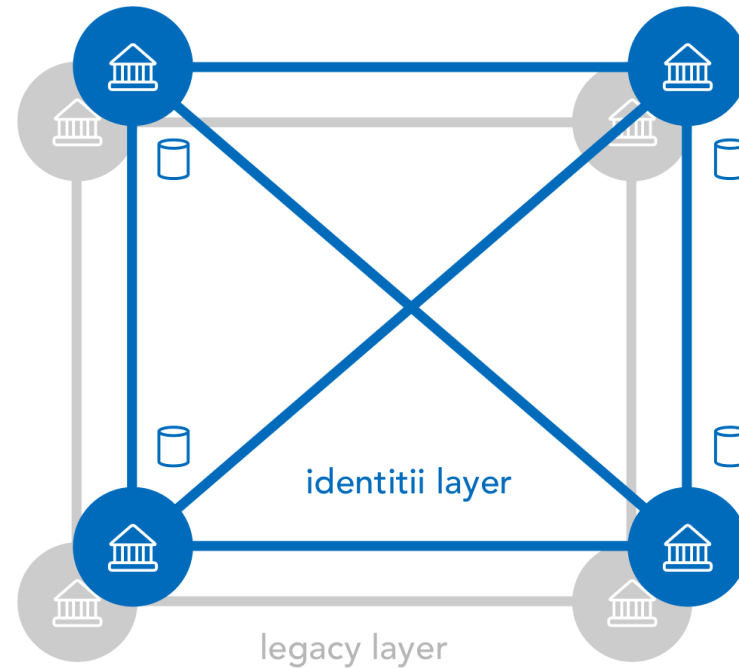

**Banks  
provide limited  
information**

**Beneficiaries  
receive limited  
information**

identitii has developed a token that links legacy systems to provide **enriched information** for every transaction

identitii's patent pending tokens use a secure, private distributed ledger to create an **information layer** for payments

**Enables trusted exchange of information**

**Interoperable with legacy systems**

**Irrefutable and immutable**

**Decentralised and resilient**

# identitii's tokens have a number of use cases

**Compliance**

Tokens with compliance attributes

**Target: Banks & MTOs**

**Payment network compatibility**

Tokens with payment message formats

**Target: Payment networks (e.g. NPP) & banks**

**Receivables**

Tokens with invoices

**Target: Banks & large corporates**

**Tracking**

Tokens with payment tracking

**Target: Regulators & banks**
